

Positron :: CHEATSHEET

Positron

Tab panes

SESSION pane contains the Variables pane, which provides an interface to view and inspect datasets, values, functions, and classes that are available in the current session.

HELP Pane provides rich, in-editor documentation for Python and R objects, functions, and packages.

HISTORY pane keeps track of your history during a session and allows re-running pieces of code in the Console or inserting into your Editor.

VIEWER pane can display outputs of Quarto and R Markdown files and interactive Shiny, Dash, Streamlit, etc. apps.

Command palette

Fast and powerful way to interact with Positron without taking your hands off the keyboard, press **Cmd/Ctrl+P** to open.

Certain commands are enabled in related contexts, e.g., package development commands when in a package folder.

Settings

Nearly every part of Positron's editor, UI, and functional behavior has customizable options that can be set at user (globally, for all Positron instances) or at workspace (folder) level.

Settings can be changed by using the Settings editor or editing the settings JSON file.

Workspaces and folders

A Positron workspace is a project folder that has been opened in its own window.

Data explorer

View or explore raw data files (CSV, Parquet, etc.) and dataframes in your Python or R sessions. Open by clicking on the table icon in Variables pane or with `%view` (Python) and `View()` (R).

Extensions

Extensions let you add languages, debuggers, tools, themes, etc. to Positron to support your development workflow.

Install extensions available on Open VSX via P3M

Settings can be extension-specific

Built-in extensions (e.g., R, Python, Markdown Language Basics): installed with Positron, can only be updated by updating Positron.

Bootstrapped extensions (e.g., Quarto, Air, Posit Publisher, Shiny): installed by Positron, act like you installed them yourself, can be updated independently of updating Positron.

Workbench

Extend Positron with commercial license in Posit Workbench, with key benefits including:

- Centralized management: Centrally manage, configure, and update Positron for all users.
- Enhanced security: User authentication and secure authorization to enterprise data sources.
- Resource management: Run sessions on powerful servers with more CPU, RAM, GPUs, etc. than a laptop.
- Background jobs: Long-running computations executed in the background with detailed audit logs.
- Commercial support: Access professional support from Posit for troubleshooting and guidance.

Keyboard shortcuts

Global shortcuts

- Run the selected code in the editor; if no code is selected, run the current statement
- Restart the interpreter currently open in the Console
- Run the file open in the editor (using e.g. `source()` or `%run`)
- Show contextual help for the topic under the cursor
- Focus the Console
- Focus the Variables pane
- Clear the Console

R shortcuts

- Insert the pipe operator (`|>` or `%>%`)
- Insert the assignment operator (`<-`)

Run remote jobs

Run Positron IDE's front end on one machine with back end (files, projects, Python and R sessions, etc.) on another machine via ordinary secure shell (SSH) connection.
